18 - Files the documents cite that are no longer in the tree

An audit of the submission found that the documents cite files that are not in the repository: **39 paths, across 19 documents**. This is the list, what happened to each, and what replaced it. Every one of them is still in git history — `git show v14.0-final:<path>` returns the file — so nothing has been lost, but a reader following a citation should not have to find that out by trying it.

The four groups below account for all 39.

The fourteen-pool model and its drawing

Replaced by: model/UFCEP6-0-3_Hospital_Patient_Pathway_v16.bpmn, diagram/hospital-patient-pathway-v16.{svg,png,pdf,-overview.png,-sections.pdf}

Path	Why it went
`bpm/diagram/UFCEP6-0-3_Hospital_Patient_Pathway_v14.pdf`	the v14.0 model and its exports were replaced by v16.0
`bpm/diagram/hospital-patient-pathway-v14.png`	the v14.0 model and its exports were replaced by v16.0
`bpm/diagram/hospital-patient-pathway-v14.svg`	the v14.0 model and its exports were replaced by v16.0
`bpm/diagram/sections/01_Medical_Secretaries.png`	the per-pool crops were for a fourteen-pool drawing; v16 sections the single pool by stage instead
`bpm/diagram/sections/02_External_Correspondence_Service.png`	the per-pool crops were for a fourteen-pool drawing; v16 sections the single pool by stage instead
`bpm/diagram/sections/03_External_Payment_Service_Provider.png`	the per-pool crops were for a fourteen-pool drawing; v16 sections the single pool by stage instead
`bpm/diagram/sections/04_Finance_Team.png`	the per-pool crops were for a fourteen-pool drawing; v16 sections the single pool by stage instead
`bpm/diagram/sections/05_External_Treatment_Laboratory_and_Imaging_Services.png`	the per-pool crops were for a fourteen-pool drawing; v16 sections the single pool by stage instead
`bpm/diagram/sections/06_Treatment_and_Chemotherapy_Bookings_Team.png`	the per-pool crops were for a fourteen-pool drawing; v16 sections the single pool by stage instead
`bpm/diagram/sections/07_Consultants.png`	the per-pool crops were for a fourteen-pool drawing; v16 sections the single pool by stage instead
`bpm/diagram/sections/08_Outpatient_Bookings_Team.png`	the per-pool crops were for a fourteen-pool drawing; v16 sections the single pool by stage instead

Path	Why it went
`bpm/diagram/sections/09_External_Scheduling_Service.png`	the per-pool crops were for a fourteen-pool drawing; v16 sections the single pool by stage instead
`bpm/diagram/sections/10_Patient_or_authorised_representative.png`	the per-pool crops were for a fourteen-pool drawing; v16 sections the single pool by stage instead
`bpm/diagram/sections/11_Clinical_Nurse_Specialist_Team.png`	the per-pool crops were for a fourteen-pool drawing; v16 sections the single pool by stage instead
`bpm/diagram/sections/12_Call_Handling_Team.png`	the per-pool crops were for a fourteen-pool drawing; v16 sections the single pool by stage instead
`bpm/diagram/sections/13_Patient_Pathway_Coordinators.png`	the per-pool crops were for a fourteen-pool drawing; v16 sections the single pool by stage instead
`bpm/diagram/sections/14_Administrative_Management_Team.png`	the per-pool crops were for a fourteen-pool drawing; v16 sections the single pool by stage instead
`bpm/diagram/sections/INDEX.md`	the per-pool crops were for a fourteen-pool drawing; v16 sections the single pool by stage instead
`bpm/model/UFCEP6-0-3_Hospital_Patient_Pathway_v14.bpmn`	the v14.0 model and its exports were replaced by v16.0
`bpm/screenshots/static-checks-v7.0.txt`	captured against v7.0, three releases ago

The v1/v2 model generators

Replaced by: tools/spec_v3.py and tools/build_v3.py, which carry the same build checks the v2 generator only promised

Path	Why it went
`bpm/tools/build_external_participants.py`	it built the five white-box outside participants; v16 draws them as black boxes
`bpm/tools/build_v2.py`	the v2.0 generator; its promised build check (refuse a model that mixes boolean and string comparisons) was never implemented in it, and is now implemented in tools/spec_v3.py
`bpm/tools/check_external_participants.py`	it built the five white-box outside participants; v16 draws them as black boxes
`bpm/tools/r0.json`	a scratch analysis output
`bpm/tools/spec_v2.py`	the v2.0 generator; its promised build check (refuse a model that mixes boolean and string comparisons) was never implemented in it, and is now implemented in tools/spec_v3.py
`bpm/tools/v1/bpmn_builder.py`	the v1.0 model definition the v2.0 generator read; the v2.0 generator has gone too

Path	Why it went
`bpm/tools/v1/spec_hospital.py`	the v1.0 model definition the v2.0 generator read; the v2.0 generator has gone too
`bpm/tools/verify_preservation.py`	it checked the model against a v2.0 baseline that no longer exists. It was cited 19 times as the only evidence for the '62/62 and 67/67 preservation checks' results, which is the clearest example in the submission of a conclusion resting on a file that is not there

The fourteen-pool drawing scripts

Replaced by: tools/render_v16.py and tools/render_sections_v16.py

Path	Why it went
`bpm/tools/export_sections.py`	it rendered and cropped the fourteen-pool collaboration
`bpm/tools/render_diagram.sh`	it rendered and cropped the fourteen-pool collaboration

The legacy Node scaffold

Replaced by: nothing; it was Sprint 0 scaffolding and the workers are Java

Path	Why it went
`bpm/diagram/UFCEP6-0-3_Hospital_Patient_Pathway_v14_sections.pdf`	the v14.0 model and its exports were replaced by v16.0
`bpm/diagram/hospital-patient-pathway-v14-overview.png`	the v14.0 model and its exports were replaced by v16.0
`package-lock.json`	Sprint 0 Node.js scaffolding, never part of the delivered system
`package.json`	Sprint 0 Node.js scaffolding, never part of the delivered system
`src/config.js`	Sprint 0 Node.js scaffolding, never part of the delivered system
`src/index.js`	Sprint 0 Node.js scaffolding, never part of the delivered system
`src/services/patientService.js`	Sprint 0 Node.js scaffolding, never part of the delivered system
`src/utils/logger.js`	Sprint 0 Node.js scaffolding, never part of the delivered system
`src/workers/referralWorker.js`	Sprint 0 Node.js scaffolding, never part of the delivered system

What this means for a marker

If a document sends you to one of these paths, the thing it describes has been replaced rather than removed. The current equivalents are in the **Replaced by** line at the top of each group. Where a result is cited as evidence, prefer the result rather than the citation: the v16.0 results, with the files that carry them, are in `docs/17-single-pool-operational-model.md`.

Nothing here was deleted to hide a number. The two results that the audit found to be contradicted by their own evidence — the empty RBAC read-back and the compensation log with no compensation in it — are both still in the tree, annotated where they stand.
